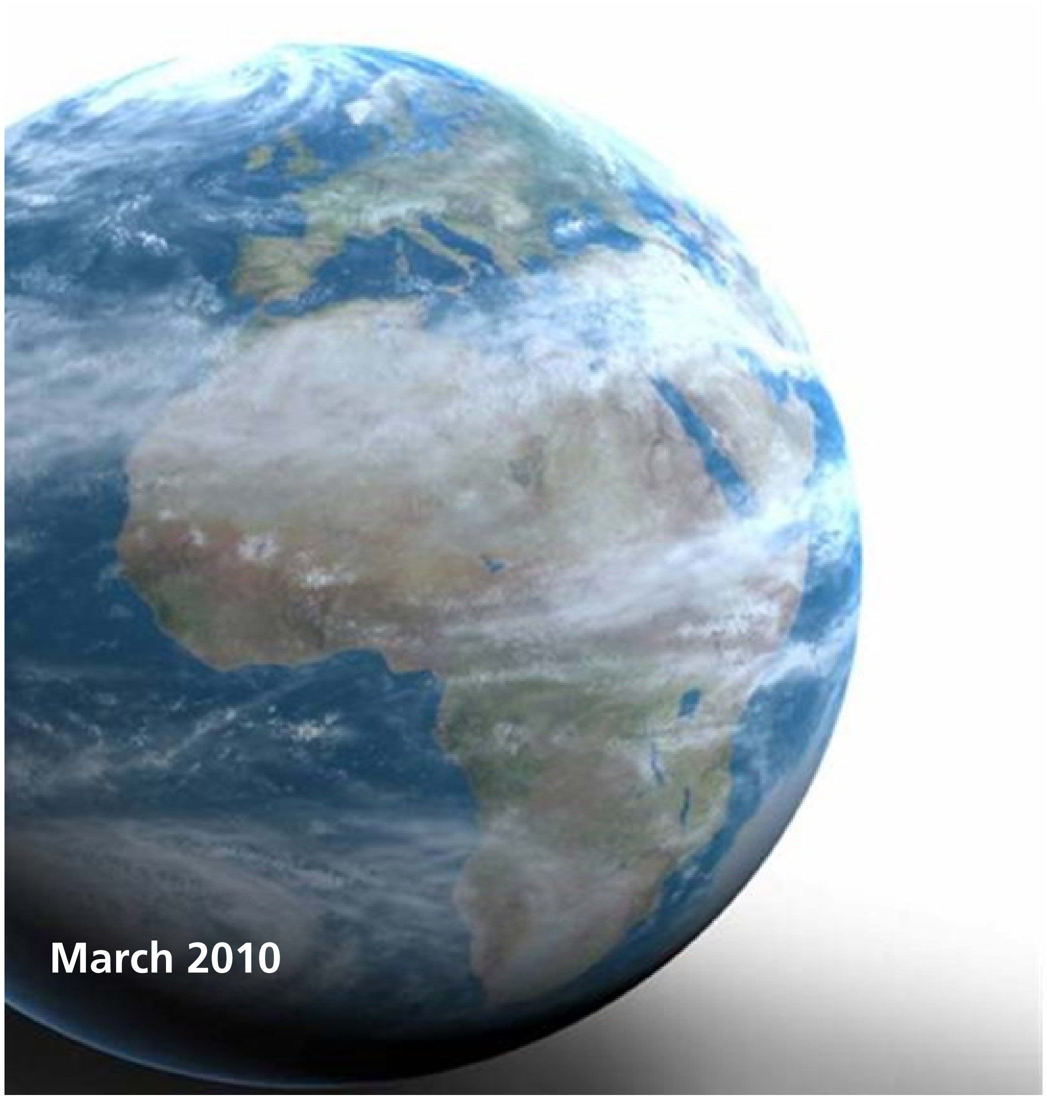
Innovative Solutions for Sustainability

Credit Update



March 2010

With the sun … we produce thermoelectric and photovoltaic electric energy

With biomass … we produce ecological biofuels and animal feed

With waste … we produce new materials through recycling, and we treat and desalinate water

With information technologies … we manage business and operational processes in a secure and efficient way

With engineering … we build and operate conventional and renewable energy power plants, power transmission systems and industrial infrastructures

With the development of social and cultural policies … we contribute to economic progress, social equity and the conservation of the environment in communities where Abengoa is present

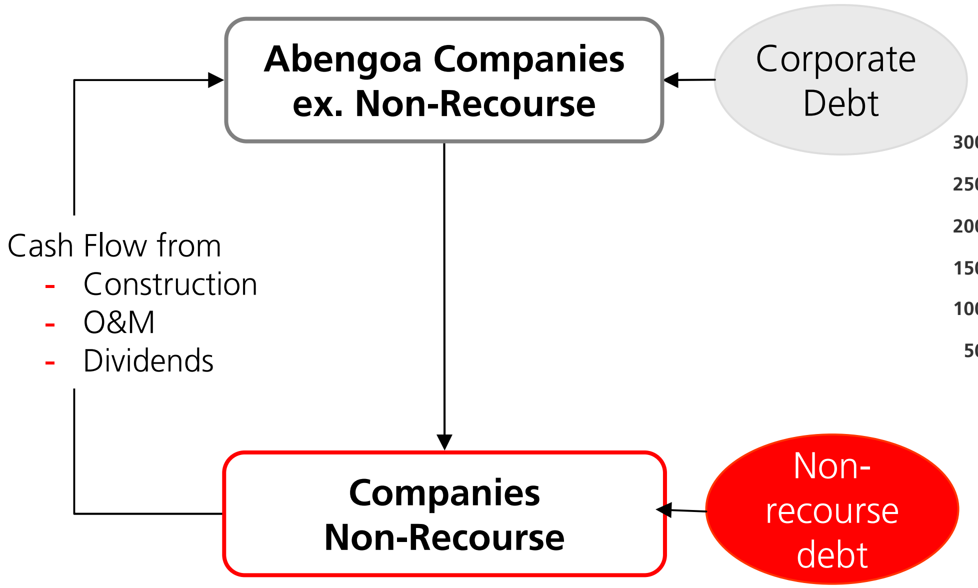
Balance of non-recourse Project Financing and Corporate Debt keeps financial discipline

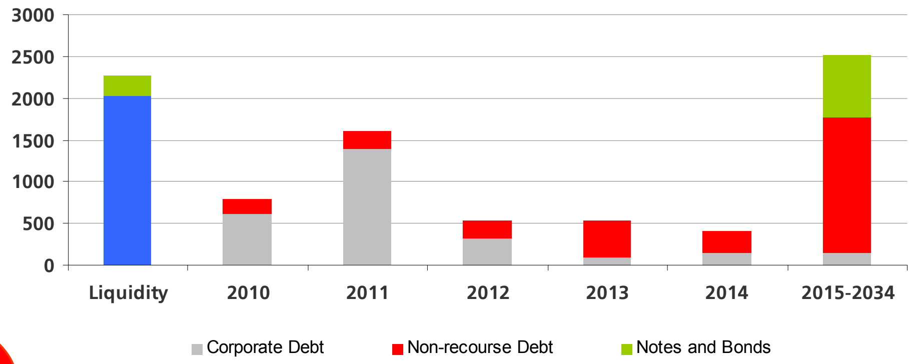
- **Non-recourse financing (NR)** on a project by project basis: used to fund significant investments. Capex commitments are subject to availability of long-term funding.
- **Corporate Debt (ex NR):** to finance the company's investments, acquisitions and general purpose requirements. Corporate debt is guaranteed by operating subsidiaries (assets totalling 3.3 bn€ + 1.8 bn€ in equity book value of non-recourse entities); subject to a Net Corporate debt / Ebitda of less than 3,0 times.

Financial Model



Liquidity and Debt Maturity Profile

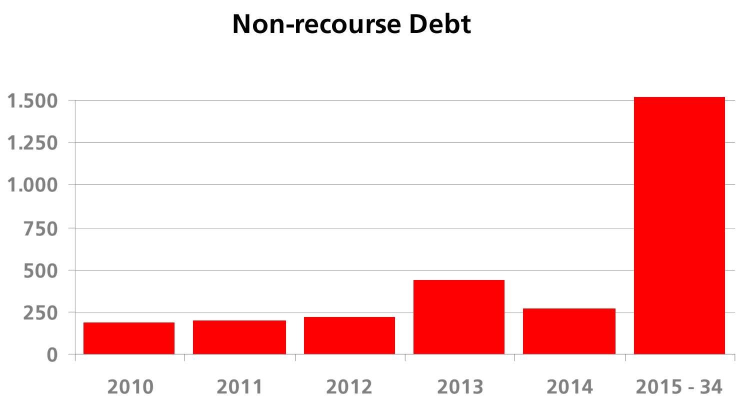
(as of dec 31, 2009 with proforma bonds)



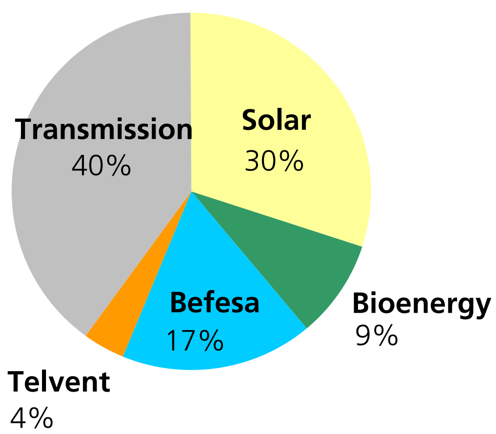
Non-Recourse Debt

- Matched with cash-flow generation profile of projects and investments:
  - The long-term concession / commercial agreements (15 to 30 years) of project finance are suitable to higher leverage of such projects
  - Repayment instalments follow project cash-flow generation profile
- Minimum risk in expected cash-flows:
  - Most debt related to projects developed under a concession scheme or fixed-tariff take-or-pay agreement

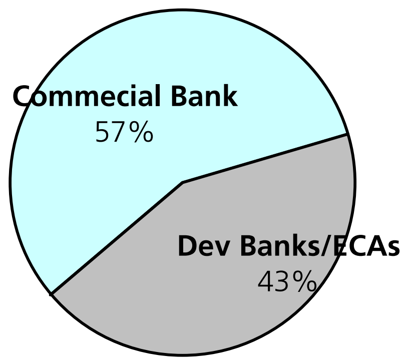
Amortization Calendar (average life > 8 years):



Breakdown of non-recourse debt per Business Unit



Non-recourse Debt Diversification



Total Non-Recourse debt 2009: 2.9 bn€

Long Term Corporate Debt

- Maintenance capex at corporate companies:	(150)		(150)
- Taxes on corporate income:	(250)	(44)	(294)

- **Key highlights**
  - Regulation: predictability in cash flows thanks to feed-in-tariff (Spain)
  - Proven technology: Parabolic trough solar power plants have been in existence for almost 50 years (Harper Lake Solar Funding Corp. rated BBB- / Baa2)
  - In-house experienced EPC contractor
  - In-house manufacturing of key components

Operating Principle

- Parabolic troughs are used to track the sun and concentrate sunlight on thermally efficient receiver tubes placed in the trough focal line
- In these tubes, a thermal transfer fluid is circulated and pumped through a series of heat exchangers to produce steam
- The steam is converted to electrical energy in a conventional steam turbine generator

Regulation

- RDL 6/2009 creates a pre-assigned registry for retribution ("Registro de Pre-asignación de Retribución")
- Requirements
  - Financing; EPC; Grid access; Key permits
- December 15th: 13 new projects presented by Abengoa are included in the PAR, effectively granting the access to the feed-in-tariff
- Retribution:

	First 25 years	Thereafter

Technology development as growth generator in the field of sustainability in Energy and Environment

- 90 M€ invested in R&D in 2008, ca. 2.2% of sales
- >900 people in R&D+i
- >80 R&D projects initiated every year
- Collaborations with reputed research centers such as NREL (US), DLR (Germany) and CIEMAT (Spain)
- Grants received, mainly from US Department of Energy and European Commission

- World pioneer in CSP solar technologies
- World leader in development of 2nd generation (biomass) bioethanol
- Advances in hydrogen, energy efficiency and other incipient renewable energies
- 7th Spanish company by R&D investment, according to the European Commission (1)

Corporate ("ex Non-Recourse") Activities

Brief Description and Ebitda Breakdown

- **Ebitda at Corporate entities ("Corporate Ebitda") is growing rapidly based on solid drivers and large backlog**
- **Based on current backlog, we expect Corporate Ebitda to total 2.5 bn€ in the next 3 years (2010 – 2012)**

Non-Recourse Projects

Nature of Revenues of Main Project Types

	Total life	Average remaining life of current projects	Characteristics
Transmission Concession Lines in Brazil	30 years	24 years	▪ Fixed price linked to inflation which is paid based on availability (no demand risk). ▪ The "off-taker" of the concessions is formed by a pool of all electricity distribution companies and major consumers, managed by ONS (the Brazilian National Power Grid Operator). ▪ All users, independently of the utilization of a specific transmission line, pay the electricity transmission companies. As a result, the payment default from a specific company has very limited impact in the revenues of each transmission company. ▪ Around 33% of total non recourse debt is sitting in concessions of transmission lines in Brasil.
Solar Plants	25 years with the initial tariff, and a different one thereafter	23 years	▪ Long-term contract with a fixed tariff. ▪ The customer are the main utilities (Endesa, Iberdrola in Spain and Sonnatrach in Algeria). ▪ Around 28% of non recourse debt is sitting in solar projects.
Desalination Plants	30 years	30 years	▪ Fixed price PPA agreement with state owned water/utility company, which is paid based on volume of water desalinated (no demand risk). ▪ The counterparty risk is therefore government risk (ie Sonnatrach and L'Algerienne des Eaux in Algeria, Chennai Metropolitan Water Supply in India)
Cogeneration Plants	25 years	25 years	▪ Fixed price PPA with Pemex and Eletrobras
